| PROFESSIONAL SUMMARY    | <div>I work with networks, Windows servers, Active Directory, firewall and VPN in a corporate environment. I especially like to automate repetitive tasks with PowerShell and Python, and I maintain a personal homelab (Proxmox, OPNsense, Zabbix) to explore technologies outside of work. I also deepened my knowledge in security with CTesp in Cybersecurity.</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                  |

| PROFESSIONAL EXPERIENCE | <div><b>Computer and Network Management Technician — Torre Confecções, SA   Feb 2025 – Sep 2026</b></div> <div>Within the IT department, responsible for network infrastructure, systems administration, and monitoring.</div> <ul style="list-style-type: none"><li>Administered Active Directory and Windows Server for 80+ users/workstations, including GPOs and permissions.</li><li>Implemented and managed LibreNMS monitoring across 270+ network devices and 50+ VoIP equipment.</li><li>Built custom LibreNMS dashboards (contacts, UPS status, equipment inventory, ticketing, switch tables, interactive room map).</li><li>Developed a Python GUI tool aggregating multiple PowerShell scripts, cutting workstation diagnostic and setup time.</li><li>Implemented system imaging for faster workstation deployment.</li><li>Configured and managed WatchGuard firewalls, including network segmentation and access control.</li><li>Configured SNMP monitoring on Huawei network equipment.</li><li>Deployed a Jenkins server with secure remote access via Tailscale VPN.</li></ul> |                                                                                                                                                                  |

### **IT Technician– Level 5 Curricular Internship — SuporteDreams | Apr 2022 – Jun 2022**

Curricular internship in user technical support and basic network administration.

- Provided technical support, including computer and Windows system setup.
- Diagnosed and resolved hardware and software issues.
- Performed basic network and equipment administration.

### **IT Technician – Level 4 Curricular Internship — ClickMed.pt | Jan 2021 – Mar 2021**

Technical support and equipment maintenance role.

- Provided technical support and installation/configuration of IT equipment.
- Performed preventive and corrective maintenance on systems.
- Assisted users in resolving technical issues.

## **EDUCATION**

---

### **Polytechnic University of Guarda | 2023 – 2025**

CTesp Cybersecurity

### **Ensuarda, Professional School of Guarda | 2019 – 2022**

Computer and Network Management Technician

## **CERTIFICATIONS**

---

### **cPanel & WHM System Administrator I & II / cPanel Professional**

Cpanel

### **LFCS preparation (+ 9 units)**

Pearson(Coursera)

### **Linux Essentials**

Cisco Networking Academy

### **FortiGate Administrator / Enterprise Firewall Administrator / FortiManager Administrator**

Fortinet

### **CCNA1 Preparation**

University of Beira Interior

### **Junior Cybersecurity Analyst Track**

Cisco Netacad

### **Advanced Cybersecurity Training**

C-ACADEMY

### **A Complete Course Windows Server Admin**

Packt

### **Google IT Support Professional Certificate**

Google (Coursera)

### **Microsoft IT Support Specialist**

Microsoft (Coursera)

---

PROJECTS

**cPanel/WHM Server Recovery and Administration**

Rebuilt a VPS with cPanel/WHM from scratch after a failure, including updating the operating system and fully restoring accounts, domains, and content.

**Network Security — Firewall**

Created and tested firewall (proxy) rules, implementing network segmentation by department to reduce exposure between sectors and strengthen the security of the internal infrastructure.

**Enterprise Network Management (UniFi)**

Managed the network infrastructure (access points, switches) on the UniFi platform, including continuous monitoring and troubleshooting connectivity issues.

**Infrastructure Monitoring (LibreNMS + SNMP)**

Implemented and managed the LibreNMS monitoring platform, including SNMP configuration on switches, development of custom plugins, and regular maintenance to ensure full visibility into the infrastructure.

**Automation and Internal Tools (Python)**

Developed a Python tool to automate workstation management tasks (user migration, system cleanup, remote diagnostics), significantly reducing the time spent on repetitive manual tasks.

**Active Directory & Windows Server**

Assisted with Active Directory administration in a Windows Server environment—managing users, groups, and OUs—and with configuring GPOs for security policies and automated software deployment.
